

# FULL COVERAGE

## The full coverage technique

The plot is crisscrossed by companion flow by pipes. Depending on the use, the pipes are made of polyethylene. The most common locations are 24x24 m (by sprinkler 24F) or 18 sprinkler per hectare and in windy areas 18x18m (by sprinkler 18F or 17F) or 31 sprinklers per hectare.

## Semi integral coverage

The ramps are fixed, installed at the flow of the irrigation season.

The extensions and sprinklers are moved in rows or in groups

## Full Coverage

Ramps and elongates are in place throughout the irrigation season. The lines operate.
